Apply using vehicle mounted ULV equipment to create an insecticidal swath. For best results apply when there is a light breeze (ie. about 5 mph) and apply in direction of breeze to obtain maximum swath width and better distribution. Do not apply if winds exceed 10 mph. Dependent on swath width,flow rate and speed of vehicle.	Up to 0.007 lbs of active ingredient per acre.
		The target dose rate to be applied is up to 0.007 lb. a.i. per acre. This can be achieved under different conditions by altering the flow of insectide from the equipment and/or the speed of the vehicle. Apply 3.5 to 7.0 fluid ounces per minute at vehicle speeds of 5-10 miles per hour using swath widths of 150-300 feet as approprate to local conditions.				
		At higher vehicle speeds, flow rates should be increased proportionately to achieve the target dose rate.				
		Not to be used within 100 feet (30 meters) of lakes and streams.				
		In treatment of corrals, feed lots and swine lots, cover any exposed drinking water, drinking fountains and animal feed before application.				
		Allow 24 hours before retreating. Do not apply more than once in a 24 hour period.

Oil or Water	1 part concentrate to 1 part of a suitable diluent, or at proportional dilutions cal- culated on the basis of applicator speed and swath width to achieve the target dose.	Apply 17.5 fluid ounces of of diluted material per acre.	Approx. 0.1 lb per acre.
